Re: Hexcel Corporation, Industrial Chemical Group,  
ECRA Case No. 86009, Revised Site Clean-up Plan

Dear Mr. Sanderson:

I am writing to follow-up on a conversation you had with our client, Mr. Bill Nosil of Hexcel Corporation regarding the proposed site clean-up plan for the former Hexcel Corporation facility in Lodi, New Jersey. As you know, ENVIRON has proposed to modify the clean-up plan to provide for extraction wells rather than a French drain to collect ground water and free product. This proposal was discussed in detail with Mr. Jeff Fehr and Mr. Steve Mayberry of your Department. It was our understanding on the basis of those discussions that this change was acceptable, however, the proposed clean-up plan would need to be appropriately amended. Accordingly, we have proceeded with the installation of ground water and DNAPL recovery wells in the areas previously proposed for construction of a French drain. This was necessary in order to comply with the schedules required in your conditional approval letter for the clean-up plan. I understand that during your conversation with Mr. Nosil you indicated a letter would be prepared by you requesting the clean-up plan amendment and outlining the specific information you required. We have not as yet prepared the amended clean-up plan pending receipt of your letter, since it is unclear what specific information you will require. Upon receipt, however, we will immediately prepare the amended plan and submit it to you for your records.

Very truly yours,

Robert L. Powell, Ph.D., P.E.  
Principal
